Summary

Backend engineer with 6 years of experience building payment and logistics platforms in Java, Go and Python.

Experience

Senior Software Engineer, PayGrid, 2023 - Present

- Designed and shipped a reconciliation service in Go processing 2M transactions/day with 99.98% accuracy.
- Led migration of 14 services from a monolith to Kubernetes, cutting deployment time from 2 hours to 12 minutes.
- Worked on improving the performance of database queries.
- Mentored 4 junior engineers through onboarding and code reviews.
- Was involved in on-call rotation and incident handling.
- Built a rate-limiting library adopted by 9 internal teams, reducing 429 incidents by 60%.
- Participated in sprint planning and daily standups.
- Introduced contract testing with Pact, catching 30+ breaking API changes before release.

Software Engineer II, ShipFast Logistics, 2021 - 2023

- Designed and shipped a reconciliation service in Go processing 2M transactions/day with 99.98% accuracy.
- Led migration of 14 services from a monolith to Kubernetes, cutting deployment time from 2 hours to 12 minutes.
- Worked on improving the performance of database queries.
- Mentored 4 junior engineers through onboarding and code reviews.
- Was involved in on-call rotation and incident handling.
- Built a rate-limiting library adopted by 9 internal teams, reducing 429 incidents by 60%.
- Participated in sprint planning and daily standups.
- Introduced contract testing with Pact, catching 30+ breaking API changes before release.

Software Engineer, ShipFast Logistics, 2020 - 2021

- Designed and shipped a reconciliation service in Go processing 2M transactions/day with 99.98% accuracy.
- Led migration of 14 services from a monolith to Kubernetes, cutting deployment time from 2 hours to 12 minutes.
- Worked on improving the performance of database queries.
- Mentored 4 junior engineers through onboarding and code reviews.
- Was involved in on-call rotation and incident handling.
- Built a rate-limiting library adopted by 9 internal teams, reducing 429 incidents by 60%.
- Participated in sprint planning and daily standups.
- Introduced contract testing with Pact, catching 30+ breaking API changes before release.

Associate Engineer, DataCraft Analytics, 2019 - 2020

- Designed and shipped a reconciliation service in Go processing 2M transactions/day with 99.98% accuracy.
- Led migration of 14 services from a monolith to Kubernetes, cutting deployment time from 2 hours to 12 minutes.
- Worked on improving the performance of database queries.
- Mentored 4 junior engineers through onboarding and code reviews.
- Was involved in on-call rotation and incident handling.
- Built a rate-limiting library adopted by 9 internal teams, reducing 429 incidents by 60%.
- Participated in sprint planning and daily standups.
- Introduced contract testing with Pact, catching 30+ breaking API changes before release.

Projects

Open-source: go-retry - a retry/backoff library with 1.2k GitHub stars.

Personal: Home automation dashboard using Raspberry Pi, MQTT and Grafana.

Education

B.Tech Computer Science, NIT Trichy, 2015-2019

Skills

Go, Java, Python, PostgreSQL, Redis, Kafka, Kubernetes, Docker, AWS, Terraform, gRPC, REST

Certifications

- AWS Certified Solutions Architect - Associate
- Certified Kubernetes Application Developer
